

PenTrac is designed to improve efficiency and standardization in mammography patient tracking and MQSA reporting. PenTrac enhances patient care workflow by automating management of patient recalls and reminders, letter generation, statistics and MQSA reports, saving time and money.

In addition to tracking patients for all related breast procedures and pathology, PenTrac prints and logs patient letters and automatically calculates MQSA statistics to increase the efficiency of the breast center. Add the optional PenAutoReader module and never manually enter results from dictated reports.

PenTrac can be installed on your server, or use our hosted solution, eliminating the need to purchase, install and maintain hardware and software. Users connect to the secure web site, enter a user name and password and enter or extract data. PenRad provides 24/7 secure transmission and backup.

PenTrac delivers:

- Improved economics with time and cost savings.
- Automated patient tracking, statistics and MQSA reporting.
- Automated letter generation in multi-language formats.
- Automated administrative reports for program evaluation and data mining.
- Flexibility. May be installed onsite or as a web-based solution hosted by PenRad.

PenTrac offers an upgrade path to full PenRad MIS for comprehensive reporting.

Additional PenRad solutions to streamline healthcare image and information management:

PenFetch

By automatically transferring images directly to workstations and/or PACS in advance of when needed for reading, PenFetch improves workflow efficiency allowing clinicians to have instant access to prior studies.

PenAutoReader

Saves time, resources and money by utilizing adaptive learning and pattern recognition technology to eliminate the need for manual data input for tracking and statistical analysis. Radiologists continue to dictate narrative reports while the system automatically extracts pertinent exam information.

PenRad DQC

A comprehensive solution for facilities to electronically manage quality records of all equipment in women's imaging. Instantly generates MQSA quality records for audits and inspections, saving time and money.

PenConnect

Dramatically reduces costs and patient anxiety by providing secure, instant access to exam results by phone or email. Reduces mailing and handling expense by as much as sixty percent for all patient correspondences, and provides a detailed audit trail.

Online Patient Portal

Allows patients to update their medical and risk history (electronic history form), and other health concerns online at their convenience, or in the breast center lobby.

Compass

A new standard for comprehensive interpretation and reporting of breast MRI studies.

Solutions for productivity and revenue optimization in radiology workflow.
